### General Instructions

1. Receive equipment and/or supplies from Barnes Healthcare.
2. Fill or spike feeding container prior to setting up pump.
3. Turn pump on—press **Power** button in lower right-hand corner.
4. In order to achieve proper accuracy, the bottom of the feeding set bag must be at least 18 inches above the top of the feeding pump, when initiating the feeding cycle.
5. Select **Keep Settings** or **Clear Settings** (for day to day use with the same feeding regimen, the **Keep Settings** option should be selected).
6. Load the Feeding Set per diagram. Do not overstretch the tubing.

### Priming the Pump

1. Prime the pump to remove air from the tubing. Press **Prime Pump** to access the pump priming options.
2. Option 1: Press **Auto Prime** to automatically prime the pump set. The pump will quickly prime the feed line and stop the formula before reaching the end of the line.
3. Option 2: Press the **Hold To Prime Feed** menu selection to carry formula to end of tubing.
4. Press **Done**.

### Setting the Feed Rate

1. Select **Adjust Feed** then **Feed Rate** (the feed rate is how fast the formula will run through the tube. This is usually ordered by your doctor). Use the buttons on the left to program the pump from 1 to 400 in increments of 1ml. Select **Enter** when desired rate is set.
2. Only use the “Volume To Be Delivered” (VTBD) option if you want the pump to stop and alarm once a set amount of formula is delivered. Select **Feed VTBD**. Use the buttons on the left to program the VTBD from 1 to 3000 in increments of 1 ml. Select **Enter** when desired VTBD is set.
3. Select **Run**. You will notice a small “drop” icon scroll down the screen when running.

### Re-Priming the Pump After the Feed Bag Empties

1. A pump set bag that has been emptied will trigger the **Feed Error** screen. In this condition, the pump set bag can be refilled to continue the feeding, but only after the pump set has been reprimed.
2. Disconnect the feeding line from the patient
3. Refill the bag.
4. Press **Continue** to begin the pump running.
5. Press **Hold**, then press **Adjust Settings**, then press **Prime Pump**.
6. Press **Hold To Prime** to prime the line. Do not use Auto Prime.
7. Press **Done**, then select **Run**.

### To Change Rate or Clear Volume

1. Select **Hold**.
2. Select **Clear Vol Fed** to clear the volume
3. Select **Adjust Settings** to adjust all settings.
4. Select **Run** to return to normal operations.
## General Instructions

- Receive equipment and/or supplies from Barnes Healthcare
  - Fill or spike feeding container prior to setting up pump.
  - Turn pump on—press Power button in lower right-hand corner.
  - In order to achieve proper accuracy, the bottom of the feeding set bag must be at least 6 inches above the top of the feeding pump, when initiating the feeding cycle.
  - Select Keep Settings or Clear Settings (for day to day use with the same feeding regimen, the Keep Settings option should be selected).
  - Load the Feeding Set per diagram. Do not overstretch the tubing.

### Priming the Pump

1. Prime the pump to remove air from the tubing. Press Prime Pump to access the pump priming options.
2. Option 1: Press Auto Prime to automatically prime the pump set. The pump will quickly prime the feed line and stop the formula before reaching the end of the line.
   - Option 2: Press the Hold To Prime Feed menu selection to carry formula to end of tubing.
3. Press Done.

### Setting the Feed Rate

1. Select Adjust Feed then Feed Rate (the feed rate is how fast the formula will run through the tube. This is usually ordered by your doctor). Use the buttons on the left to program the pump from 1 to 400 in increments of 1ml. Select Enter when desired rate is set.
2. Only use the “Volume To Be Delivered” (VTBD) option if you want the pump to stop and alarm once a set amount of formula is delivered. Select Feed VTBD. Use the buttons on the left to program the VTBD from 1 to 3000 in increments of 1 ml. Select Enter when desired VTBD is set.
